

Job Title:

Senior Software Architect

Are you a visionary software architect with a passion for creating innovative solutions to complex technical challenges? Do you have a proven track record of designing and delivering scalable, high-performance software systems? Do you feel the heat of disruption?

As our Senior Software Architect, you will be responsible for leading the architecture and design of our software systems, ensuring they are scalable, reliable, and maintainable. You will work closely with our engineering, product, and business teams to define and execute on the technical vision for our products, and drive the development of cutting-edge software solutions that will set us apart from the competition.

Responsibilities:

- Define and execute on the technical vision for our products, ensuring they align with our business goals and customer needs
- Lead the design and architecture of our software systems, ensuring they are scalable, reliable, and maintainable
- Work closely with our engineering, product, and business teams to understand requirements and develop technical solutions that meet our business needs
- Provide technical guidance and mentorship to our engineering team, ensuring they are adhering to best practices and standards
- Stay up-to-date with the latest trends and technologies in software architecture and development, and recommend new tools and techniques to improve our development process
- Develop and maintain technical documentation, ensuring our software systems are well-documented and easy to understand

Qualifications:

- 5+ years of experience in software architecture and design, with a track record of delivering scalable, high-performance software systems
- Expertise in a variety of programming languages, such as Java, Python, or Ruby, and proficiency in one or more front-end frameworks, such as React or Angular
- Strong understanding of software engineering best practices and design patterns, and experience with agile development methodologies
- Proven track record of leading technical design discussions and mentoring junior engineers to ensure code quality and best practices are maintained across the engineering team
- Strong analytical and problem-solving skills, with the ability to tackle complex technical challenges and find creative solutions
- Bachelor's degree in Computer Science, or a related technical field
